

ABSTRACT

An ink-stamp storage system for magnetically storing ink stamps. The storage system has a storage panel with a strip of ferrous metal. The ink stamps are provided with a magnet and are magnetically mountable on the storage panel. One type of storage system is a rack that has a rotatable base element with multiple storage panels mounted on the base element; another type of storage system has a flat base with a single storage panel fixedly attached to the base. An anti-slip means is provided on the underside of the flat base, to prevent the base from inadvertently moving across a desktop surface.
